EX.NO 9. ROUTING AT NETWORK LAYER.

17-09-26

AIM:-

To simulate and configure static routing protocol using cisco packet tracer and observe packet routing between networks.

PROCEDURE:-

1. Open Cisco Packet Tracer, place three routers two switches and four PCs.
2. Connect devices using ethernet cables.
3. Configure IP addresses of router interface and PCs.
4. Enable the router interfaces using no shutdown command.
5. Configure static route on routers using IP route command.
6. Configure static route and backe up route.
7. Verify the routing tables using and testing connectivity.

RESULT:-

Thus, static routing was successfully simulated and configured using cisco packet tracer and packet transmission of backup was verified.
