ANALYZE DIFFERENT TYPES OF SERVERS USING WEBALIZER.

Aim:-

To analyze different types of web servers using the Webalizer web log analysis tool in Fedora.

OBJECTIVES:-

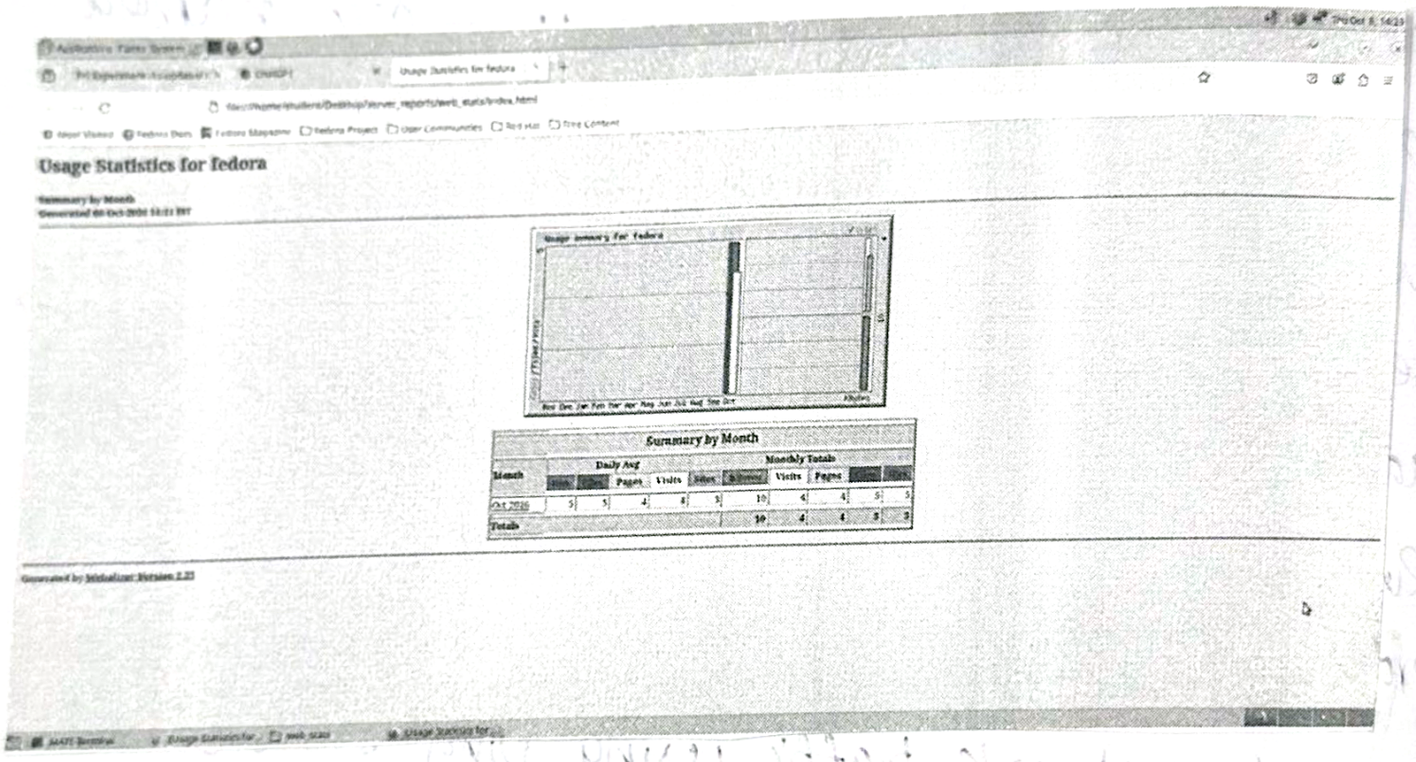

1) Understand. web server log files.
2) Configure Webalizer for server log analysis
3) Analyze the number of visitors, requests, pages, files and data transferred.
4) Compare the usage statistics of different web servers such as Apache, Nginx and IIS.

PROCEDURE:-

1) Install Webalizer and point to the log file (eg: /var/log/apache2/access.log).
2) for Nginx/Apache, view results at http://localhost/webalizer.
3) Repeat the same procedure for log files across different web servers.

RESULT:-

The Webalizer tool succesfully analyzed web server log files and generated graphical and statistical reports. The generated reports can be used to compare traffic, requests, visitors, resource usage and data transfer across different web servers.

Usage Statistics for fedora

Summary by Month

Summary by Month

Month	Daily Avg				Monthly Totals
